MASS LAYOFFS IN JANUARY-FEBRUARY 2003 AND ANNUAL AVERAGES FOR 2002

Employers initiated 3,597 mass layoff actions in January-February 2003, as measured by new filings for unemployment insurance benefits during the 2 months, according to the U.S. Department of Labor's Bureau of Labor Statistics. Each action involved at least 50 persons from a single establishment, and the number of workers involved totaled 340,474. (See table 1.) In January-February 2002, there were 3,529 mass layoff events involving 402,805 workers. (January-February 2003 had one more week than the January-February periods of the prior two years.)

With the resumption of the Mass Layoff Statistics program, data are now available since November 2002 (issued on Dec. 24, 2002). The addition of December brings the total of layoff events for all of 2002 to 20,269 and the total of initial claimants to 2,244,631. Both of these measures were lower than in 2001 (21,467 and 2,514,862, respectively). Additional information on the annual data is provided starting on page 2 of this release.

Industry Distribution

Manufacturing industries accounted for 35 percent of all mass layoff events and 40 percent of all initial claims filed in January-February. A year earlier, layoffs in this sector accounted for 39 percent of events and 47 percent of initial claims. Within manufacturing, the number of initial claimants was highest in transportation equipment (22,592, mainly in automobile manufacturing), followed by food processing (13,586, mostly in fruits and vegetables). (See table 2.)

Twelve percent of all layoff events and all initial claims filed during the 2 months were in administrative and waste services, mostly in temporary help services. Thirteen percent of the events and 9 percent of all initial claims in January-February were from construction, largely specialty trade contractors. Retail trade accounted for 9 percent of all events and initial claims, mainly from general merchandise stores. Transportation and warehousing contributed an additional 5 percent to all events and 6 percent to initial claims, primarily in school and employee bus transportation and in scheduled passenger air transportation.

Mass Layoff Statistics Program

This news release marks the resumption of the Mass Layoff Statistics (MLS) program. It was discontinued as of Dec. 31, 2002, due to a lack of funding. However, funds for the MLS resumption were contained in H.J. Res. 2, the Omnibus Appropriation Bill, signed into law on Feb. 20.

Government establishments accounted for 4 percent of events and 3 percent of initial claims filed during these 2 months, particularly in executive, legislative, and general government and in educational services.

Compared with January-February 2002, the largest decreases in initial claims were reported in transportation equipment manufacturing (-19,730) and in computer and electronic products manufacturing (-9,627). The largest over-the-year increase in initial claims was reported in transit and ground passenger transportation (+6,334).

Geographic Distribution

Among the four regions, the highest number of initial claims in January-February due to mass layoffs was in the West, 112,935. (See table 3.) Administrative and support services and agricultural and forestry support activities accounted for 25 percent of all initial claims in that region during the 2 months. The South followed with 84,446 initial claims (mainly in transportation equipment manufacturing and in textile mills). The lowest numbers of initial claims was reported in the Northeast, 67,687, largely in transit and ground passenger transportation.

From January-February 2002 to January-February 2003, the number of initial claimants in mass layoffs declined in three of the four geographic regions. The largest decrease occurred in the South (-32,418), largely in administrative and support services and in apparel manufacturing. Eight of the nine geographic divisions reported over-the-year decreases in the number of initial claims associated with mass layoffs, with the largest declines in the East North Central (-23,420), West South Central (-15,490), and East South Central (-15,179) divisions. The Middle Atlantic division reported the only increase (+17,785).

California had the largest number of initial claims filed in mass layoff events this January-February, 87,682, mostly in administrative and support services, followed by Pennsylvania, 25,786, New York, 24,071, and Ohio, 20,786. These four states accounted for 51 percent of all layoff events and 47 percent of initial claims for unemployment insurance. (See table 4.)

Texas reported the largest over-the-year decrease in initial claims (-13,548), followed by Alabama (-12,825), California (-9,656), Michigan (-9,449), and Illinois (-9,246). The largest over-the-year increase occurred in New York (+19,215).

Review of 2002

During 2002, 20,269 layoff events occurred in the nation, resulting in 2,244,631 initial claims filings for unemployment insurance. In 2001, there were 21,467 events and 2,514,862 initial claimants. (See table A.)

Manufacturing accounted for 35 percent of all mass layoff events and 40 percent of initial claims filed during 2002. A year earlier, manufacturing accounted for 42 percent of events and 49 percent of initial claims. Initial claim filings were most numerous in transportation equipment, 176,619, followed by food production, 98,284, machinery manufacturing, 87,710, and computer and electronic products, 85,898. Compared with 2001, the largest decrease in initial claims occurred in transportation equipment (-126,520). The largest over-the-year increase in initial claims occurred in textile product mills (+6,001).

The number of initial claims filed in 2002 due to mass layoffs was higher in the West, 745,638, than in any other region. Layoffs in administrative and support services, agricultural and forestry support activities, and professional and technical services accounted for 31 percent of the claims in the West. The fewest number of mass-layoff initial claims was reported in the Northeast region, 338,965. Over-the-year decreases in mass-layoff initial claims occurred in each of the four regions, with the largest in the Midwest (-227,476).

Table A. Number of mass layoff events and initial claimants for unemployment insurance, 1996-2002

Year	Layoff events	Initial claimants for unemployment insurance
1996	14,111	1,437,628
1997	14,960	1,542,543
1998	15,904	1,771,069
1999	14,909	1,572,399
2000	15,738	1,835,592
2001 ^r	21,467	2,514,862
2002	20,269	2,244,631

r=revised.

Among the 50 states and the District of Columbia, California recorded the largest number of initial claims filed in mass layoff events for the period, 576,110. Michigan reported the largest over-the-year decrease in initial claims (-133,109), followed by Pennsylvania (-43,857). The largest over-the-year increases occurred in Alabama (+41,593) and New York (+39,174).

Note

The monthly data series in this release cover mass layoffs of 50 or more workers beginning in a given month, regardless of the duration of the layoffs. Information on the length of the layoff is obtained later and issued in a quarterly release that reports on mass layoffs lasting more than 30 days (referred to as "extended mass layoffs") and provides more information on the industry classification and location of the establishment and on the demographics of the laid-off workers. Because monthly figures include short-term layoffs of 30 days or less, the sum of the figures for the 3 months in a quarter are higher than the quarterly figure for mass layoffs of more than 30 days. (See table 1.) See the Technical Note for more detailed definitions.

Technical Note

The Mass Layoff Statistics (MLS) program is a federal-state program that uses a standardized, automated approach to identifying, describing, and tracking the effects of major job cutbacks, using data from each state's unemployment insurance database. Each month, states report on establishments which have at least 50 initial claims filed against them during a consecutive 5-week period. These establishments then are contacted by the state agency to determine whether these separations lasted 31 days or longer, and, if so, other information concerning the layoff is collected. States report on layoffs lasting more than 1 month on a quarterly basis.

A given month contains an aggregation of the weekly unemployment insurance claims filings for the Sunday through Saturday weeks in that month. All weeks are included for the particular month, except if the first day of the month falls on Saturday. In this case, the week is included in the prior month's tabulations. This means that some months will contain 4 weeks and others 5 weeks, and the number of weeks in a given month may be different from year to year. Therefore,

analysis of over-the-month and over-the-year change should take this calendar effect into consideration.

The MLS program resumed operations in April 1995 after it had been terminated in November 1992 due to lack of funding. Prior to April 1995, monthly layoff statistics were not available.

Information in this release will be made available to sensory impaired individuals upon request. Voice phone: 202-691-5200; TDD message referral phone number: 1-800-877-8339.

Definitions

Initial claimant. A person who files any notice of unemployment to initiate a request either for a determination of entitlement to and eligibility for compensation, or for a subsequent period of unemployment within a benefit year or period of eligibility.

Mass layoff event. Fifty or more initial claims for unemployment insurance benefits filed against an establishment during a 5-week period, regardless of duration.

¹ The event realization rate is the percentage of total mass layoff events lasting more than 30 days. The initial claimant realization rate is the percentage of total mass-layoff initial claimants associated with layoffs lasting more than 30 days.

² These quarterly numbers are provisional and will increase as more

data on these layoffs become available. Recent experience suggests that the number of extended mass layoff events is generally revised upwards by less than 10 percent and the number of initial claimants associated with such events increases by 25-40 percent.

^p = preliminary.
